

Automatic NFS4 mounting of EDF cluster is failing

Table of contents

Issue

Environment

Cause

Resolution

Issue

When starting the NFS4 service, the cluster does not automatically mount on clusters where Kerberos is not enabled.

Environment

Ezmeral Data Fabric v7.2

Cause

By default, the NFSv4 server is configured to use Kerberos authentication, but the cluster is not set up with Kerberos.

Resolution

To resolve this issue, modify the "**SecType**" parameter in the `/opt/mapr/conf/nfs4server.conf` file from "`krb5`" to "`sys`" and then restart the NFS service. This should help in resolving the issue.
